

Squirrel first access

Configure MySQL JDBC connector

Run SquirrelSQL.

Open **Drivers** section and double-click on **MySQL Driver** within *Drivers* list.

Go to *Extra Class Path* tab and click on **Add** button

Change Driver: MySQL Driver

Change Driver: MySQL Driver

Driver

OK Close

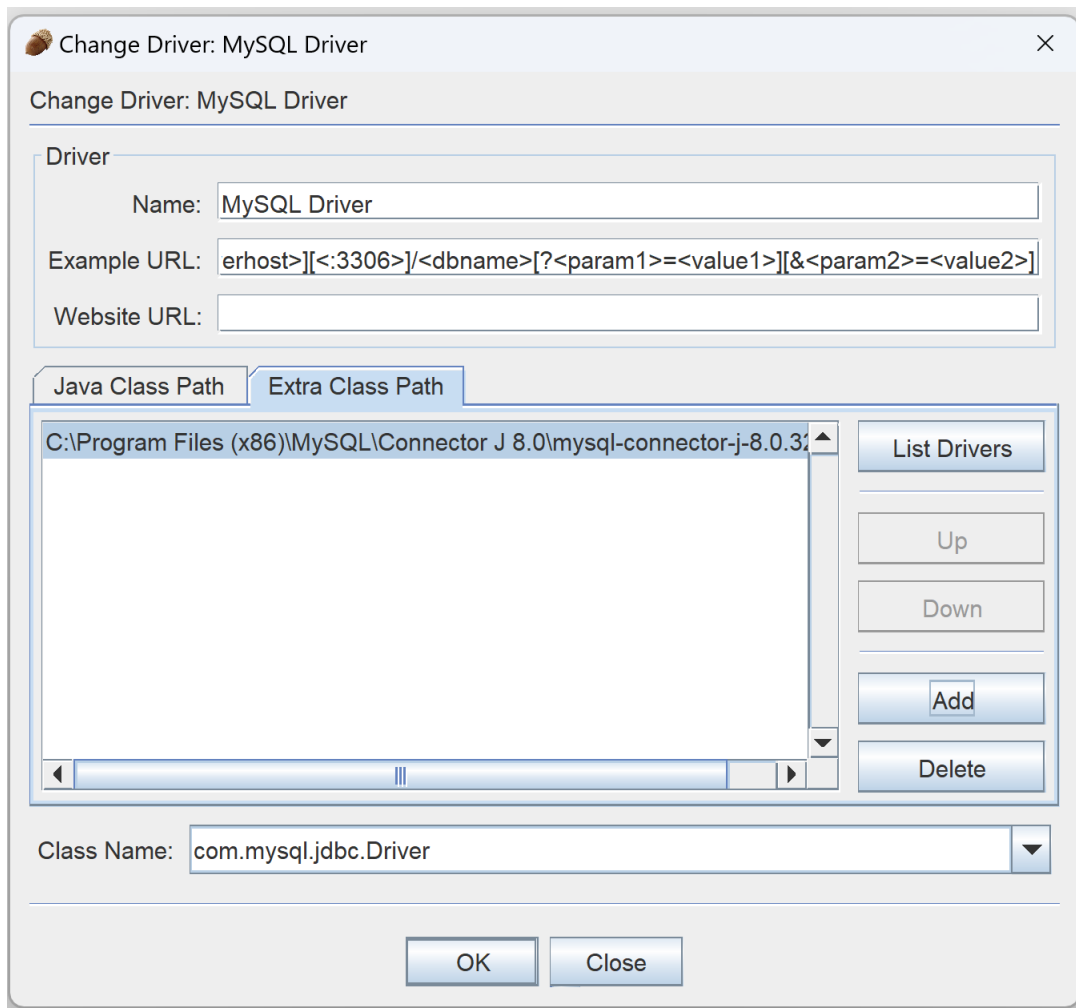

Locate the *jar* file containing JDBC driver for MySQL that for standard Windows MySQL installation is in **C:\Program Files (x86)\MySQL\Connector J 8.0** directory

Select *.jar* file and click on *Open* button:

Click on **List Drivers** button

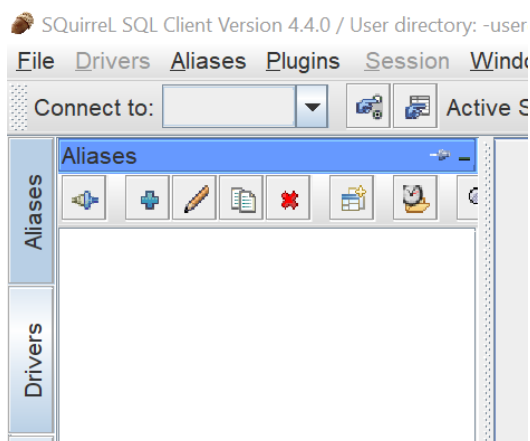

Verify that **Class Name** at the bottom of the window contains *com.mysql.jdbc.Driver*; if not, fill in the field with “*com.mysql.jdbc.Driver*”.

By clicking **Ok** the driver is registered within SquirrelSQL.

Set up a connection to MySQL database via JDBC

Open **Aliases** section and click on the **plus** button to add a new connection alias.

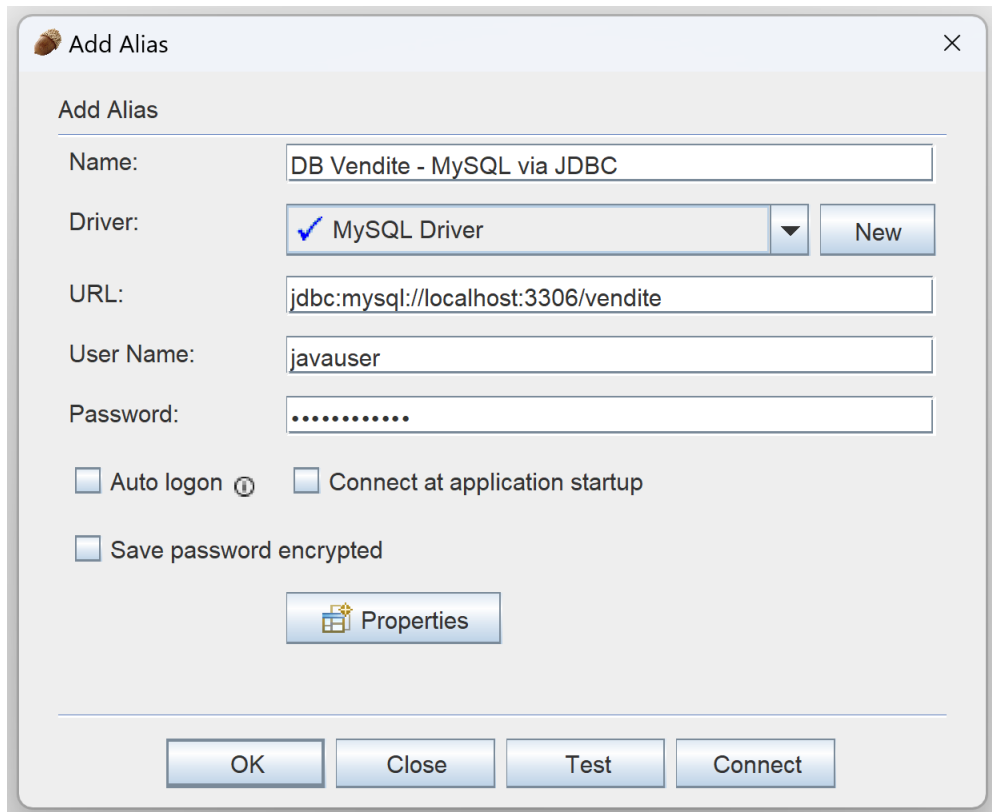

Fill in the information using **MYSQL Driver**.

Insert the URL to connect to local standard MySQL database:

jdbc:mysql://localhost:3306/vendite

and provide User Name and Password

Add Alias

Add Alias

Name: DB Vendite - MySQL via JDBC

Driver: ✓ MySQL Driver New

URL: jdbc:mysql://localhost:3306/vendite

User Name: javauser

Password:

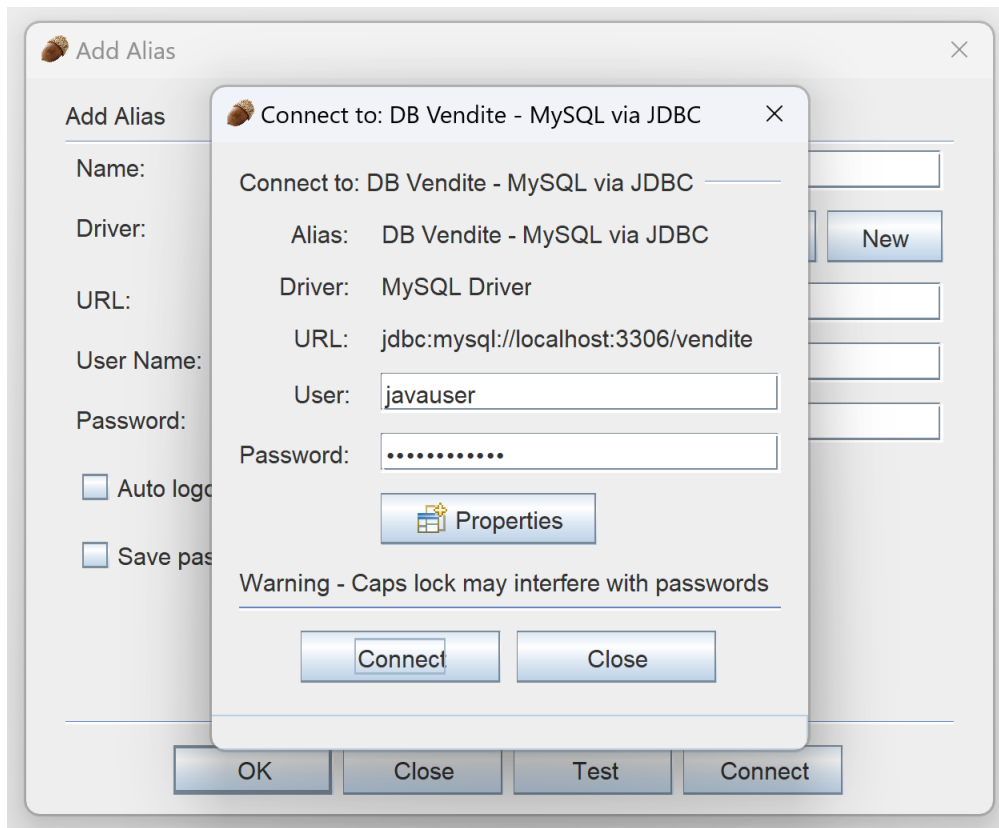

☐ Auto logon ⓘ ☐ Connect at application startup

☐ Save password encrypted

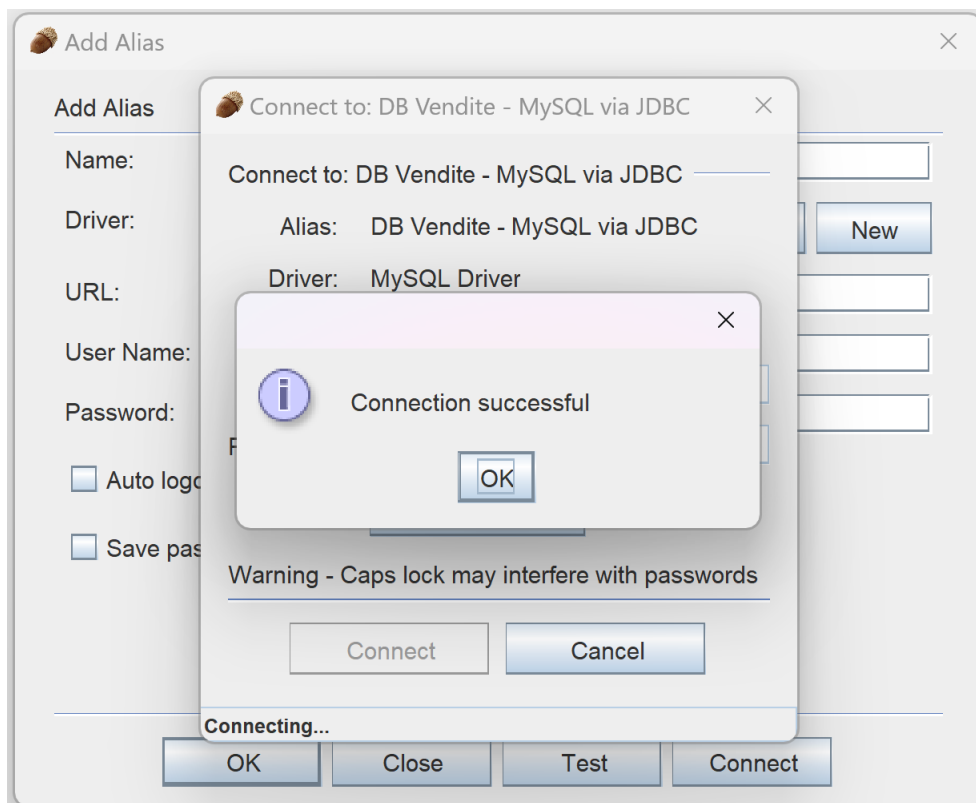

Properties

OK Close Test Connect

Click on **Test** button to test the connection parameters.

Click on **Connect** to test the connection.

By clicking **OK** button the connection alias setup is completed and you can see it in **Alias** section.
